

Part II, Section B.1 – Operation Description (Processing)

There may be occasion where packaged product is shipped directly to customer distribution centers rather than to a [REDACTED] facility. Shipment packaging and configuration will be identical to that described in Part II, Section A.1.d.

Again, no repackaging or blending will occur at these facilities, only distribution of packaged product. Worker exposure is nil due to the nature of the product and release is limited to infrequent events where packaging becomes damaged and thus, not fit for distribution and use. Waste is considered non-hazardous and would be disposed of *via* incineration or landfill.
